

Tesla's Magnifying Transmitter and Cheops pyramid

Analysis of the **Tesla's Magnifying Transmitter and the Cheops pyramid design and geometry** show that they both **have** identical parametar ratios inherent to phenomena with **qualities of God's perfection !**

Studying "stationary waves", in his experiments on the wireless transmission of energy through the Earth, using his famous "Magnifying Transmitter", Nikola Tesla determined the "wave train" pulse time propagation of 0.08484 seconds¹ - which means that the **resonant frequency of the planet Earth - which Nikola Tesla used as a resonator – has a value: $1 / 0.08484 = 11.78$ Hz.**

According to the Vladimir Yashkardin calculations², the **Keops pyramid is a very powerful vibrating-acoustic transmitter of infrasound** that generates a wide spectrum of frequencies: 6.89, 7.65, 8.17, 9.19, 10.21, 10.77, 12.25 Hz **with a basic carrier frequency of 12.25 Hz.** Obviously, this value is very close to the Earth's resonant frequency value determined by Nikola Tesla.

Considering Nikola Tesla's measurements on December 14, 1899 in his Colorado Springs laboratory³, resonant frequency of the "Magnifying Transmitter" system with the latest version of "Extra coil" was 89.42 kHz and the resonant frequency of the primary circuit was 56.4 kHz. So **TMT resonant frequency ratio is: $89.42 / 56.4 = 1.58$ - that is almost equal to $\pi/2$ (1.57).**

Same ratio that characterize **design** of TMT, **to which Nikola Tesla insisted strongly⁴**, was applied on Tesla's Wardenclyffe Tower **geometry** also. **Ratio of above ground part and underground part of this extremely controversial Tesla's "Wireless Energy Transfer Station" is: $96 \text{ m} / 57 \text{ m} = 1.58 \sim \pi/2$.**

It is well known that the **Cheops pyramid** is characterized by many mathematical and cosmic constants - but the most famous is **relation of its length of the edge and its height that is: $230.45 \text{ m} / 143.6 \text{ m} = 1.575 \sim \pi/2$!**

It is really more than interesting that the **same principle applied to Cheops pyramid geometry** characterize its **design** (structure) **too !!!**

The latest theories and research⁵ offer us a interpretations according to which **Cheops pyramid structure consist of two materials: granite** (rooms and passes) **and geopolymer concrete** (outer part of the Keops pyramid). **Propagation speed of the sound in these materials is: 5950 m/s and 3770 m/s . It is almost fascinating that their ratio has a value: $5950/3770 = 1.578$ which is also almost identical to the value of $\pi/2$!**

The fact that the resonant frequency of the Earth, measured by Nikola Tesla (11.78 Hz), and which predefines the key parameters of TMT, is almost identical to the carrier frequency of the SCIROCCO-Keops infrasound transmitter^{2,5} (12.25 Hz), as well as the fact that their geometry and design are characterized by the same ratios whose value ($\pi/2$) indicates a "geometry of perfection" and hint at the same **qualities and properties as are woven into all of God's Creations.**

These facts imposes the idea that the Nikola Tesla's "Magnifying Transmitter" and the Cheops of Pyramid are "devices of similar properties and purposes", that is, both are the "Ether Energy Machines"⁶ whose function and operation are harmonized with physical, particle-wave parameters (probably also by function) of our "Blue Planet" in the cosmic constellation !!!
