

## "About Tesla' Scalar waves, Torsion fields and measurements in AP BPS"

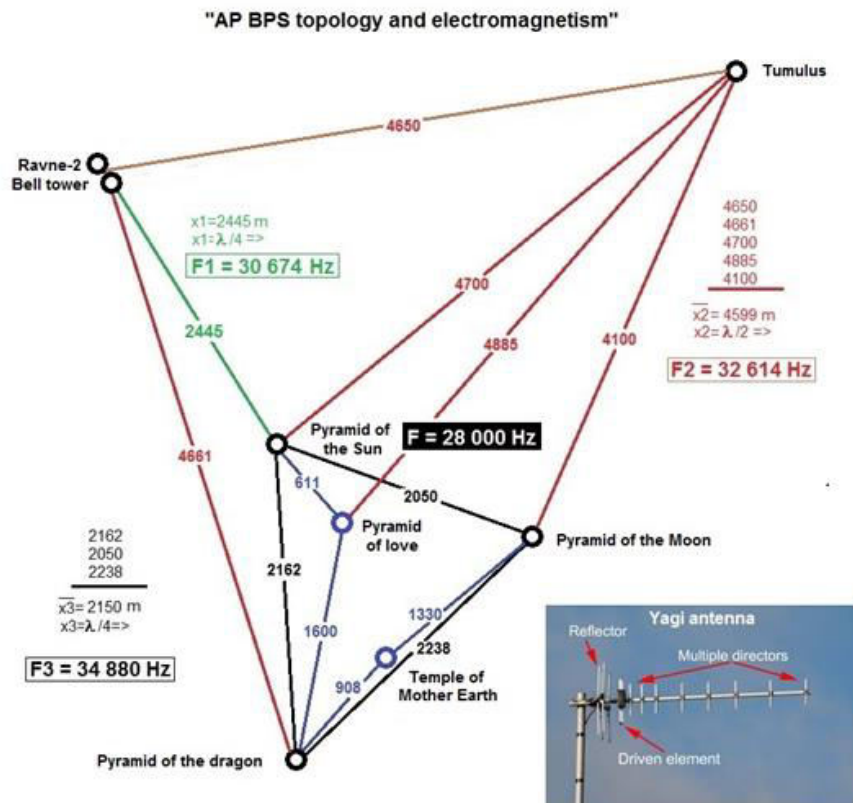

My perennial research of Tesla's technology has shown that the principles that Nikola Tesla used AFTER HIS discovery of STATIONARY WAVES during his investigations in Colorado Springs, are significantly different from everything that he has done previously.

Unfortunately, everything we know about Tesla, what is written, and about what we speak all these years – emerges from the period of his life and work up to Colorado Springs (1900.g) and even some years after – but about what he did next 40 years (Tesla died in 1943) we do not know NOTHING. What is available to us, however, is often just a bunch of unconfirmed data from untrusted sources ... often subjectively colored by imagination of article's author.

However, the synthesis of Tesla's being and existence shows us that his insights were absolutely consistent with Nature and its extremely effective methods that were known to the ancient civilizations also – that can be seen in sameness of used technology and the absolute equality of applied principles.

Therefore, I am absolutely sure that the knowledge of ancient civilizations exceeded our present knowledge several times, and that Nikola Tesla was one of the first people of this civilization who seriously approached to this knowledge - and so his technology certainly will be the basis of future, more advanced, technologies.

In the measurements report from June 2016 [1], I showed that REALISTIC ARRANGEMENT of objects in AP BPS STRONGLY AGREE WITH PRINCIPLES of affirmative interference that is applied in the CONSTRUCTION of the so-called "YAGI" ANTENNA, which is used today for passive amplification EM radio and television SIGNALS. Considering that AP BPS is an "assembly" of 7 elements (see pic. below or [1]), EXACTLY ARRANGED IN SUCH A WAY THAT ALL THEIR MUTUAL DISTANCES ARE HARMONIZED ACCORDING TO THE PRINCIPLES FOR PASSIVE RESONATORS – i.e. amplifiers – CONSTRUCTION, and what's more - exactly for the frequency of 28 kHz that is the frequency of energetic beam that central object, Bosnian Pyramid of the Sun, "broadcast" - it is hard to believe that such objects configuration is accidental.

"Yagi" system element	The frequency of that is resonant	"AP BPS 'broadcasting system"
Dipole	28 000	BPS: 28 000
1. reflector	29 400	
2. reflector	30 870	30 640 - "Green dipole element"
3. reflector	32 400	32 614 - "Red dipole element"
4. reflector	34 000	34 880 - "Black dipole element"

In the measurements report from September 2016 [2] IT IS showed that the spatial structure of the electric field in the AP BPS is absolutely "non-standard" - but is regularly structured (!) - and is in full accordance with the wave mechanics rules that would be applied by some contemporary broadcasting equipment expert, designer of the broadcasting system that would generate a same signal as it is detected at the top of the Bosnian Pyramid of the Sun, and that would constitute a same complex structure of energy fields that is detected in measurements performed.

Variable energy density expressed in the form of a variable electric field strength, of noticeable regularity, which grows with a height and then decline, in both - in the vertical and in the horizontal plane – by values synthesis gives the spatial energy distribution which has the shape of elongated ball, or "energetic ellipsoid" in the certain space area above the top of appropriate facilities. EXACTLY SUCH "SPHERICAL" STRUCTURE OF ENERGY FIELDS with adequate regularity THAT IS DETECTED by measuring performed, INDICATES A SPATIAL STANDING WAVES EXISTENCE IN THE AP BPS. In the Nikola Tesla' Non-Hertzian terminology the term of "Spatial (volumetric or cubical) Standing Wave" corresponds to the "Scalar Wave" term.

What is more than interesting is the fact that this, complex energy structure, founded by the measurements performed - can be achieved only via very specific arrangement of ALL relevant facilities, including their individual structural and geometrical characteristics! The fact that ALL PARAMETERS of PARTS and WHOLES ARE HARMONISED, indicates the extreme meaningfulness of their shape and arrangement that – obviously - could hardly be accidental.

The measurements we performed in September 2016, are unique in the world because we use the latest scientific methods and technologies for "insight" in the part of Reality that is the subject of the most modern researches and the New science based on the theory of Torsion fields.

What are we talking about and what all this has to do with Tesla?

There are numerous explanations of scalar waves on the Internet. Of course, science has its own interpretation of this phenomenon based on the valid theories. From this aspect, they are certainly true and correct.

However, imperfection of scientific explanations is a result of EM theory anachronism and its insufficient harmonization with Reality. In fact, J.C.Maxwell published his "Dynamic theory of electric fields" a long ago – in

1864 !!! So the theory which is basics of modern electromagnetism was created before more than one and a half century!

Even more unusual is the fact that the original Maxwell's theory, given in the form of quaternion's (hyper complex numbers) was rewritten and "simplified" by Oliver Heaviside and his colleagues and "reduced" to the vectorial form that is used today.

Besides all the unquestionable advantages for the interpretation of the so-called. "Hertzian", transversal vectorial EM waves, i.e. kind that was used by G. Marconi e.g. and by which we listen radio, watch TV, etc., this reduced version of Maxwell' theory is less suitable for Scalar waves describing - because in the process of Maxwell' theory "simplification" the scalar part of (hyper) complex equations - was expelled although it was more suitable for describing the so-called. "Longitudinal" electrodynamic vibration, the kind which Nikola Tesla was working with.

So "Scalar waves" are just another name for the "Longitudinal waves", that is for the waves which, in contrast to the "transverse -vectorial" waves, oscillate in the direction of their propagation. An example of this kind of waves, is sound e.g. - where air molecules vibrate in the direction of sound, longitudinal, waves propagation. But these are mechanical waves.

The same kind of vibration, but of an "electric" medium, is the Electrodynamics Longitudinal wave, or Scalar Wave. These, depending on the propagating medium, its geometry and structure, due to affirmative / destructive interference mechanisms action a Standing (or slowly moving) waves can be created. The Standing or "Stationary waves" was energy form noticed by Nikola Tesla on July 4, 1900 in Colorado Springs, which were his greatest inspiration for future work ...

So what's the problem?

The problem is that the original Maxwell's theory for longitudinal kind of vibration gives the solutions by which scalar waves can reach an arbitrary, including infinite, value of the propagation speed!

Well - here's the problem! According to a key postulate of Einstein's Theory of relativity any object with real rest mass can not reach, and especially overcome, the speed of light!

Considering the excellent consent of the "vectorial form" of Maxwell's theory with H.Hertz experiments and - on the other side - the incompatibility of its "scalar" variant, the solution is found in the "expelling" that option from the theory and, some time after Maxwell's death, his work was revised in the form which is used even today.

In my opinion these are the key reasons why Nikola Tesla was suppressed from science, likewise the story of Scalar waves, as well as the Ether - which is the (quant) carrier of Tesla longitudinal vibrations.

And of course - ether was also kicked out from the science, on the basis of the famous Michelson Morley experiment ...

However, even Einstein claimed that the world without Ether is unthinkable ...

Unconventional science used other terms - but - they are just another name for what Tesla called "luminiferous ether".

So, all the modern theories, still not accepted by the so-called mainstream science, is based on Tesla's ethereal, NON-HERTZIAN TECHNOLOGIES, longitudinal vibrations and SCALAR FIELDS, described also in the work of Walter Russell, Nikolai Kozyrev, Anatoly Oshtrin ... Although they all had their own terminology, e.g. Russel -The light, Kozyrev - Flow of time, Oshtrin - Micro leptonic field, ... IMPLIES A NON-GRAVITATIONAL and NON-ELECTROMAGNETIC, subtle-energy VIBRATIONS THAT POSSESSES elementary AWARENESS!

Currently - the most popular is the concept of Torsion fields (also axion, spin, spinor or microlepton field) based on the Einstein-Cartan theory and on some unconventional solutions of Maxwell's equations. Despite the somewhat pejorative categorization by those who have a monopoly on the truth - as a pseudo-science - these studies definitely are basis for a New science.

The Torsion fields concept is introduced in the Soviet Union during the eighties by a group of brilliant physicists led by Anatoly Akimov and Gennady Shipov, who began their researches at the Center for Non-Traditional technologies.

Torsion fields have the important characteristic of being affected by the specific topology/geometry of macroscopic objects and biological fields. Torsion field emanations can travel at velocities at least as high as  $10^9$  times the speed of light. Torsion fields can interact with laser beams (change frequency); affect biological processes; are generated by melting or solidifying some materials; affect quartz crystals; affect some electronic components; can favorably change some beverages; have been noted to affect gravity and - what is the strangest - they express residuality feature which means that they have a "memory" and possess elementary awareness !!!

According to the initial investigations and measurements conducted, Torsion fields are about a thousand billion billion billion ( $10^{30}$ ) times weaker than gravity – that already is the weakest force in nature, and this is reason why it is so difficult to detect them with the existing technology. However, their activity can be seen all around us. In the form of galaxies, tornadoes, snail houses, sunflowers, DNA ... In later researches it was shown that the sources of dynamic torsion fields (spinning sources with emission) are a much stronger than static torsion fields generated by the rotation of the object.

Today in Russia there are generators of torsion fields, as well as detectors for such kind of energetic phenomena that provide a range of practical results such as e.g. the observation of instant images from the stars and receiving a "non-electromagnetic" signals from the Sun - up to 130 days [3] before they arrive, as "conventional", transversal –vectorial EM waves , or in the form of "solar wind" ...

Briefly, according to the original Tesla's interpretations and descriptions, main characteristics of his Non-Hertzian waves, e.g. movement with infinite speed, propagation without attenuation ..., are absolutely impossible qualities: "... of surface waves in the near zone of the transmitter" - how the classical science interpret and describe them, while - on the other hand -, this features are in totally agreement with the Torsion waves qualities.

So, Tesla really worked for the future!

Belgrade, 22.11.2016.

Goran Marjanovic, BScE
